SUMMARY

A full stack AI developer and final-year B.Tech student with expertise in creating scalable, AI-powered web applications. Proficiency in utilizing Next.js, Python, and Agentic AI to bridge the gap between machine learning models and user-facing products. Proven track record in optimizing backend automation and deploying generative AI solutions in production environments.

EXPERIENCE

TechAivv Technologies

AI Engineer Associate

Software Developer Intern

Remote

Jun 2026 – Present

Nov 2025 – Jun 2026

- Developing a scalable Full Stack AI SaaS platform, integrating Generative AI models to automate 80% of manual user workflows.
- Designed and built responsive user interfaces using Next.js and React, achieving a 95+ Lighthouse performance score and reducing initial page load latency by 45%.
- Engineered robust backend architectures for real-time AI inference, optimizing API response times to under 200ms for seamless data processing.
- Collaborated with cross-functional teams to deploy scalable features, reducing development turnaround time by 25% through efficient component modularity.

Paisalo Digital Limited

Python Developer Intern

New Delhi, India

Jul 2025 – Aug 2025

- Built internal workflow automation solutions using Python (Pandas, NumPy, OCR), automating 80% of repetitive tasks and reducing manual effort by 50%.
- Automated backend scheduling pipelines, eliminating manual scheduling errors and improving system uptime by 30%.
- Executed API integrations and debugged data pipelines, improving data flow reliability by 35%.

PROJECTS

Brahmastra | Options Intelligence Terminal, React, TypeScript, Vite, Node.js · [Github Link](#)

- Built a private Indian options-intelligence terminal with responsive NIFTY 50 and BANK NIFTY dashboards, simulating real-time market ticks with candlestick, VWAP, option-chain, IV, open-interest, delta, and defined-risk spread analysis.
- Implemented modular market-data and broker-provider layers, including a simulated paper-trading environment and a safeguarded DhanHQ integration boundary, plus scanner views, entry-radar signals, risk limits, trade journaling, and a TradingView Pine Script indicator for explainable technical setups.

SSB Sarthi | Defence Exam Prep Platform, Next.js, React, TypeScript, Tailwind CSS, Supabase · [Github Link](#)

- Built a full-stack platform helping Indian defence aspirants prepare for the SSB, with personalized prep plans, OIR timed practice tests with scoring, PPDT story-writing exercises, OLQ reflection journals, and a readiness dashboard.
- Implemented Supabase database schemas, automated profile creation, and row-level security policies to secure user-specific data and deliver a responsive preparation experience.

The Crop Doctor | AI Diagnostics Web App, CNNs, Python, Deep Learning, Web Integration · [Github Link](#)

- Developed a deep learning classifier utilizing Convolutional Neural Networks (CNNs) trained on 5,000+ annotated images, achieving 95% validation accuracy across 10 distinct disease categories.
- Integrated the model with a web interface to deliver diagnostic results in under 2 seconds, empowering farmers to potentially reduce crop spoilage by 20% through early detection.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL, C++, TypeScript, C

Databases: SQL, NoSQL, Redis, Firebase, MongoDB

Frameworks: Next.js, React.js, Express.js, Tailwind CSS

Tools & Technologies: AWS, Docker, Kubernetes, TensorFlow/Keras, CI/CD

EDUCATION

Vivekananda Institute of Professional Studies (GGSIPU)

Bachelor of Technology in AI & Data Science (8.57 CGPA)

New Delhi, India

2022 – 2026

ACHIEVEMENTS

- Core Team '25, TEDxVIPS:** Managed external relations and vendor partnerships; strategized and secured key sponsorships essential for the operational success of the event.
- Solved 300+ problems on LeetCode spanning Arrays, Trees, and Dynamic Programming, earning the 100 Days Badge (2025) for consistent problem-solving.
